

Gorilla Pathology and Health With a Catalogue of Preserved Materials John E. Cooper and Gordon Hull

Gorilla Pathology and Health (2017), Academic Press Elsevier ISBN: 9780128020395 is a combination of book and catalogue that contains extensive information on the pathology, health, welfare, and conservation of gorillas. It:

- Brings together studies, data, and clinical practice from difficult-to-access or obscure journals and NGO reports, in different languages, for all interested parties and practitioners.
- Provides perspectives on existing research in gorilla pathology and health, both for those studying conservation and welfare practices and those seeking a greater understanding of comparable diseases in humans
- Includes illustrative figures of gross and microscopic pathological changes, museum specimens, photos of field necropsy and techniques, and examples of laboratory tests
- Features an extensive list of references and further reading, in different languages
- Incorporates a comprehensive, descriptive catalogue of gorilla material from around the world.

With a Foreword by Louise Leakey and Emmanuel de Merode and contributions by Margaret E. Cooper, Ian Redmond, Paul Budgen, Martyn Cooke, Allen Goodship, Jane Hopper, Jenny Jaffe, Gladys Kalema-Zikusoka, Sophia Keen, Brian N. Livingstone, Keith Maybury, Dermot McInerney, Roberto P. Miguez, Jaimie Morris, Ogeto Mwebi, Geoffrey Pearson, Carina Phillips, Celsus Sente, Paolo Viscardi and others.

PRESS RELEASE

AFRICA FROM EAST TO WEST

Zoologist David Happold shares his journey from the Red Sea to the Atlantic in this fascinating adventure memoir

This book describes a journey across the width of Africa from Massawa on the Red Sea coast of Eritrea to Cape Verde in Senegal. Most of this journey was through the semi-arid regions just south of the Sahara desert – although the author also travelled further south through the savannas and rainforests of West Africa.

With several photographs and a journey map, this book is rich with information on African history and culture, and it charts David's journey which took place in the late 1960s during a relatively peaceful time in Africa. He travelled by any method possible – by train, bus, car, boat and sometimes even on foot.

David is a zoologist with special interests in natural history and landscapes, but the book also discusses the many people he encountered en route, from all walks of life. Like all travellers in Africa, he had to contend with the harshness of the bad roads, rough sleeping and strange foods, but this was offset by the warm friendship and kindness he received from fellow travellers and local people.

PUBLISHED: 28TH OCTOBER 2018
PRICE: £10.99
ISBN: 9781912575343

Each chapter covers a different section of the journey, beginning in the east. There are also chapters about a special expedition to a remote volcanic crater in Sudan, and what it was like living and working in Sudan and Nigeria in the 60s.

The Census of African Primates is now available from PASA.

Member wildlife centers successfully reintroduced 993 animals to the wild, including 195 primates, rescued 1,156 animals from the illegal wildlife trade, and provided conservation education to more than 500,000 people in affected areas. Read all the data at pasa.org/census.

Announcements

Les Primates d'Afrique de l'Ouest - Guide d'identification de poche

A French language version of the Pocket Identification Guide to West African Primates has now been published by Biotope in France: <http://www.biotope-editions.com/index.php?article457/les-primates-d-afrique-de-l-ouest-guide-d-identification-de-poche>.

Le guide de poche des primates d'Afrique de l'Ouest présente les 81 espèces de singes qui peuplent les forêts et les savanes entre le Sénégal et le Cameroun. Présenté de façon originale sous forme de dépliant, ce guide illustre toutes les espèces ainsi que leur répartition, leur nom scientifique, français, anglais et quelques langues locales (Soussou, Malinké, Poular/Peul). Des indications sont données sur l'écologie et les traits de vie, ainsi que le statut UICN de chaque espèce. C'est le compagnon de tout résident ou voyageur en Afrique de l'Ouest.

Photographic Documentation of Scalped Olive Baboon Available Online

An adult male olive baboon, *Papio anubis*, was scalped by a lion and then followed during 14 months (14/3/2004-23/5/2005) in the WAP complex (W-Arli-Pendjari) transboundary biosphere reserve by Dr. Anh Galat-Luong and Dr. Gerard Galat, primatologists at IRD (the French Research Institute for Development). The baboon recovered without infection thanks to the care he received from the females and young of his group.

Numerous photos show his taking over by a courtship of young, the progressive skin recovery, and how his hair grew again until healing.

Peter Grubb's Systematics of Red Colobus Monkeys (subgenus *Piliocolobus*)

An unpublished analysis by the late Peter Grubb on the systematics of red colobus monkeys (subgenus *Piliocolobus*) is now available. This 2002 analysis was not published prior to Peter Grubb's death in 2006. Because of this manuscript's scientific value, it is now being made available at: www.wildsolutions.nl/grubb_2002.

Invitation to participate in a new project of the IUCN SSC A.P.E.S. database:

The A.P.E.S. Wiki

The A.P.E.S. Wiki aims to provide information about ape population status, threats, conservation opportunities and challenges at the site level. This open-access platform will enable information exchange among conservation practitioners, scientists, donors, and other stakeholders involved in ape conservation.

All 34 small and great ape taxa will be included in the A.P.E.S. Wiki. We are currently starting with great ape sites. **If you are familiar with and/or working at a great ape site, we invite you to participate by filling in a wiki template.**

If you would like to contribute or have any questions, please email Isabel Ordaz-Németh at apeswiki.info@gmail.com
